EDUCATIONAL EXHIBITION COMPANY

To those who have been receiving our literature now for about two years this abridged pictorial catalogue is not a necessity.

It will serve however to illustrate at a glance some of the modern exhibition material we have available at the present time and the wide range of subjects which these cover.

In addition to our stock lines we have prepared in the past and are now equipped to design and make up exhibits on special topics or general health exhibits of a comprehensive nature. Considerable experience in the manufacture and use of such material fits us to do this, not only considerably better, but at less expense than our customers can do it locally.

It is one thing to know what you want to exhibit, another to collect photographs, devise "startlers," prepare aphorisms, models and literature with the least waste of material and time, in such a manner as to stand hard and continued usage and above all to design something that will attract not half the people—but everyone.
